(4) Basic Test Circuit

Fig. 3 : Basic Test Circuit for NE4-HCHO-S

- Circuit is test use only.
- Remove the short-pin before sensor is connected to the circuit.
- Apply the voltage to +Vcc and -Vcc at the same time.

[Notes]

- Use only within specified conditions.
- Sensor characteristics must be measured in clean air.
- Electrode pins must be correctly connected.
Wrong connection does not allow correct functions.
- Do not apply voltage directly to electrode pins.
- Do not bend pins.
- Do not put excess vibration or shocks.
- If sensor housing is damaged or scratched, do not use.
- Do not blow organic solvents, paints, chemical agents, oils, or high concentration gases directly onto sensors.
- Do not solder to pins of sensor directly.
Use exclusive sockets.
- Do not use contact grease when sensor is connected to the sockets.
- Do not disassemble or change any parts.
- If sensor is used under irregular atmosphere, contact us.
